

The Custodian

Vue assignment

Your assignment.

Create a web app that allows the custodian for Hlíðarendi 1 to manage his tasks for the apartment complex.

As a user you should be able to register an “assignment”

Assignment should have the properties

- Name,
- Apartment
- Severity
- Date
- Text description of the assignment

When you add an assignment, it should be displayed in a list to the right of the register form. In the list you should see minimal information about the assignment. Additionally, you can click a button that registers the selected activity as done. When you set an assignment as done it should be removed from the assignment list and should be placed in the backlog which contains all completed tasks/assignments.

The user should be able to switch between an assignment \ log view. (hint, you can do this with a simple if\else directive)

Visual example of the assignment.

The interface should resemble the provided wireframe, it does not need to be exactly the same, but it needs to have the same functionality.

	Assignments	Log
Name	John Johnsson - 11c - 8/7 - Broken Toilet	Done
Apartment	John Johnsson - 11c - 8/7 - Broken Toilet	Done
Severity	John Johnsson - 11c - 8/7 - Broken Toilet	Done
Date	John Johnsson - 11c - 8/7 - Broken Toilet	Done
Text description of the problem	John Johnsson - 11c - 8/7 - Broken Toilet	Done
	John Johnsson - 11c - 8/7 - Broken Toilet	Done
	John Johnsson - 11c - 8/7 - Broken Toilet	Done
	John Johnsson - 11c - 8/7 - Broken Toilet	Done
